

Below is the description of what we need as a raw version of our TMS

Main Menu:

Drivers

HRs (admin)

-Drivers tab

Contains a list of drivers from the specified table, each with its own specs and location as a zip code or city name with 5 global statuses below.

We must be able to search among the list of drivers the closest to the entered in the search tab ZIP code or city name. The results must be sorted from the shortest to longest deadhead to the origin point. The ideal way is to get google maps involved in order to get the most accurate results.

Global statuses for the drivers:

Available - Green

Available On - Light Green

Not Available - Red

Hold - Orange

Out of Service - Purple

Each parameter of the driver should be displayed in the row (specs)

Unit #

Status

Date

City

Owner/Driver

Owner/Contact Number in Bold(Can be the same)

Origin City

Distance from the entered in search ZIP code

Truck type (with dims)

Payload

Notes (straps, PG, LG, Blankets, PPE etc.)

Status Action (A, AO, NA, H, OOS) with clickable buttons for status change

Each status except "Out of service" can be changed by every user(dispatcher).

Below you can find some pictures as a brief explanation of what we need to have by the end.
